LIFTS ALL HANDLING SYSTEM

BOX-HANDLER

The Box-Handler optimizes frequent handling of carton boxes in freight terminals for example. The operator quickly and smoothly moves the boxes from a conveyor belt to a pallet. The supplementary hook takes care of nearly anything that is not packed in a box.

Ergonomics in focus

Whereas manual handling is uncomfortable and prone to injuries, and traditional tube lifters ungainly, Box-Handler is the perfect alternative. The ergonomic design immediately improves the productivity and shortly the operator notices an improved personal health. The employer sees a rapid decline in absence due to sore backs and shoulders.

Cost-effective solution

Not only backs and joints are saved thanks to Box-Handler. The owner also saves energy costs since the gripper is powered by compressed air, consuming only 5-10 percent compared to traditional vacuum lifts.

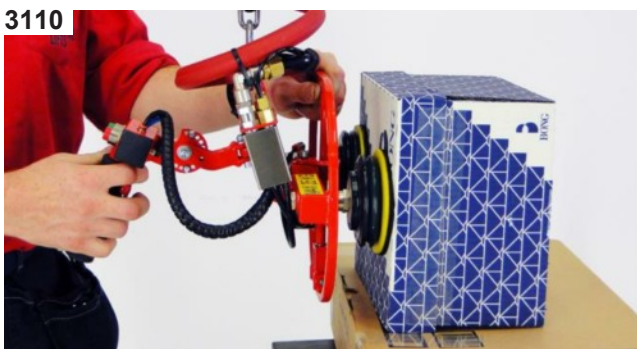

Efficient handling

The operator chooses whether the load should be released automatically or with a simple push on a button. When needed, the swiveling hook is very convenient to fold out. The quick movement up and down guarantees a fast handling in a seemingly neverending stream of boxes. Box-Handler gets the job done!

Control: Custom-made pistol trigger

Max load: 35 kg

Special functions:

- Optional automatic or manual release of load
- Manual tilt 90 degrees to grip from all angles
- Adjustable and centered handle for left and right handed operators
- Supplementary hook, swiveling 360 degrees

LIFTS ALL HANDLING SYSTEM

TAILOR-MADE GRIPPERS

Do you need to tilt or rotate your boxes, or lift them high up? At Lifts All we will make a solution that is tailor-made to meet your requirements.

CONTROLS

Speed-Handle (SH) and Pro Speed-Handle (PSH)

Used when the weight of the lifting objects varies. Proportional control of up and down speed, which means that a gentle push on the button smoothly moves the load. A harder push moves the load faster. Flexibility in the Bal-Trol enables fine tuning of vertical position by +/- 5 cm by manual influence directly on the lifting object. This makes the handling easier when putting a wheel on an axle for example.

Balancing - weightless handling

Balancing is used when a few known objects of different weights need to be handled quickly, for example at assembly lines in car industries. The load is handled in a state of weightlessness, which means that the operator can manipulate the product with the hands directly on the object. In other words - superior flexibility and precision!

Multi-Balancer - weightless handling

This unique self sensing system is recommended when lifting several different loads up to 50 kg. No adjustments are needed when changing load. As with regular balancing the operator can manipulate the product with the hands directly on the object. Driven by air and 24V. For Compact models.

2526

3723 - Box-Handler 2

Control: Comfort-Handle
Max load: 20 kg
Function: Super ergonomic control and optional rotation.

2440

Control: PSH
Max load: 15 kg
Function: Lifts boxes of three different sizes and weights.

2118

Control: SH
Max load: 34 kg
Function: Quick and smooth handling of a long box.

2526

Control: PSH
Max load: 25 kg
Function: Tilts 90 degrees and automatically returns to start position when the load is released. Dual control.

2214

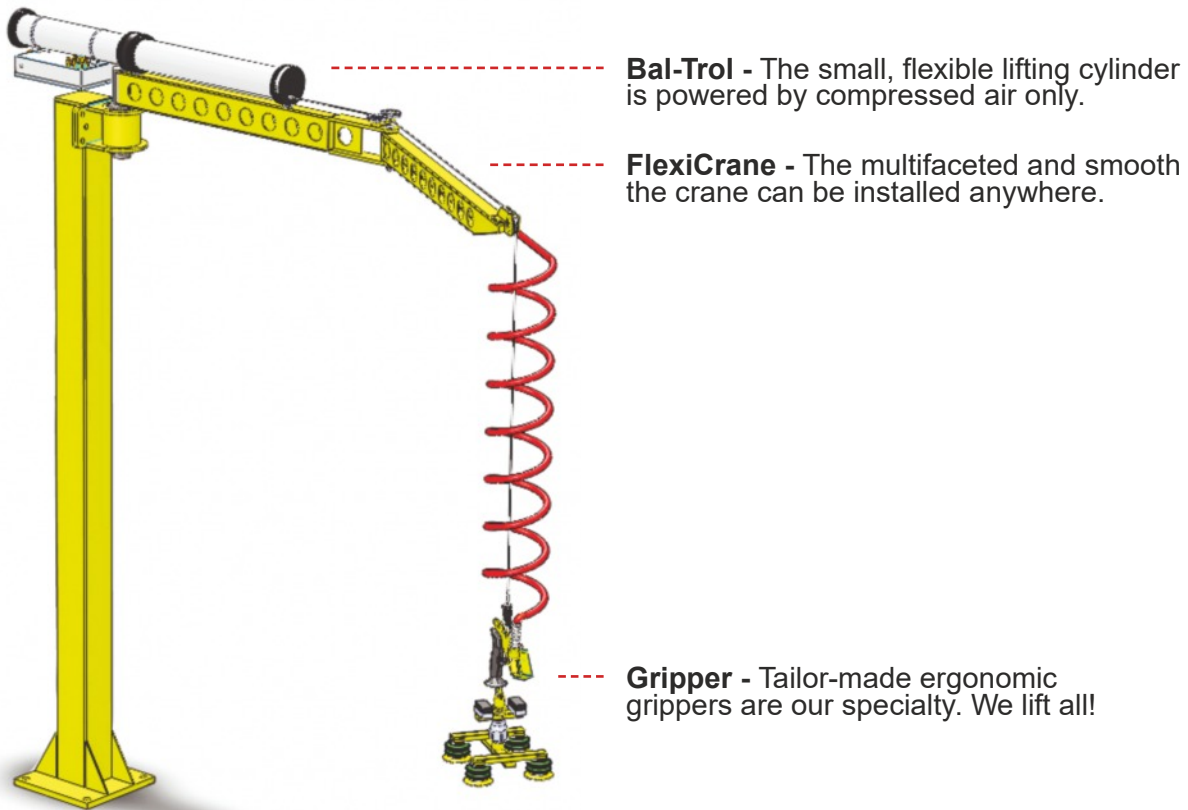

Control: Balancing
Max load: 6 kg
Function: Small and handy Z-gripper for quick handling of smaller boxes.

3276 (front page)

Control: PSH
Max load: 30 kg
Function: Silent (max 70 db, normal level of conversation). For carton boxes of less good quality.

LIFTS ALL HANDLING SYSTEM

YOUR COMPLETE LIFTING SYSTEM

We are happy to make your handling weightless and ergonomic. You give us your trust and **DALE** will provide you with a superior solution for your handling.

Please contact us for a complete review of your work place handling
