

1000 kg capacity

ALUMINIUM ADJUSTABLE MOBILE GANTRY – Model 535

- High quality light weight aluminium construction
- Continuously adjustable width
- Telescopic adjustable height legs
- Easy assembly - Easy to move
- Equipped with beam trolley as standard
- Swivel wheels with stops

Beam and legs of the crane are manufactured of high quality aluminium profiles. Therefore the construction is very light and can be easily moved in dismantled condition.

Due to link joints between beam and legs the crane is easily erected by two people: fold out the four legs, secure with bolts and adjust to height.

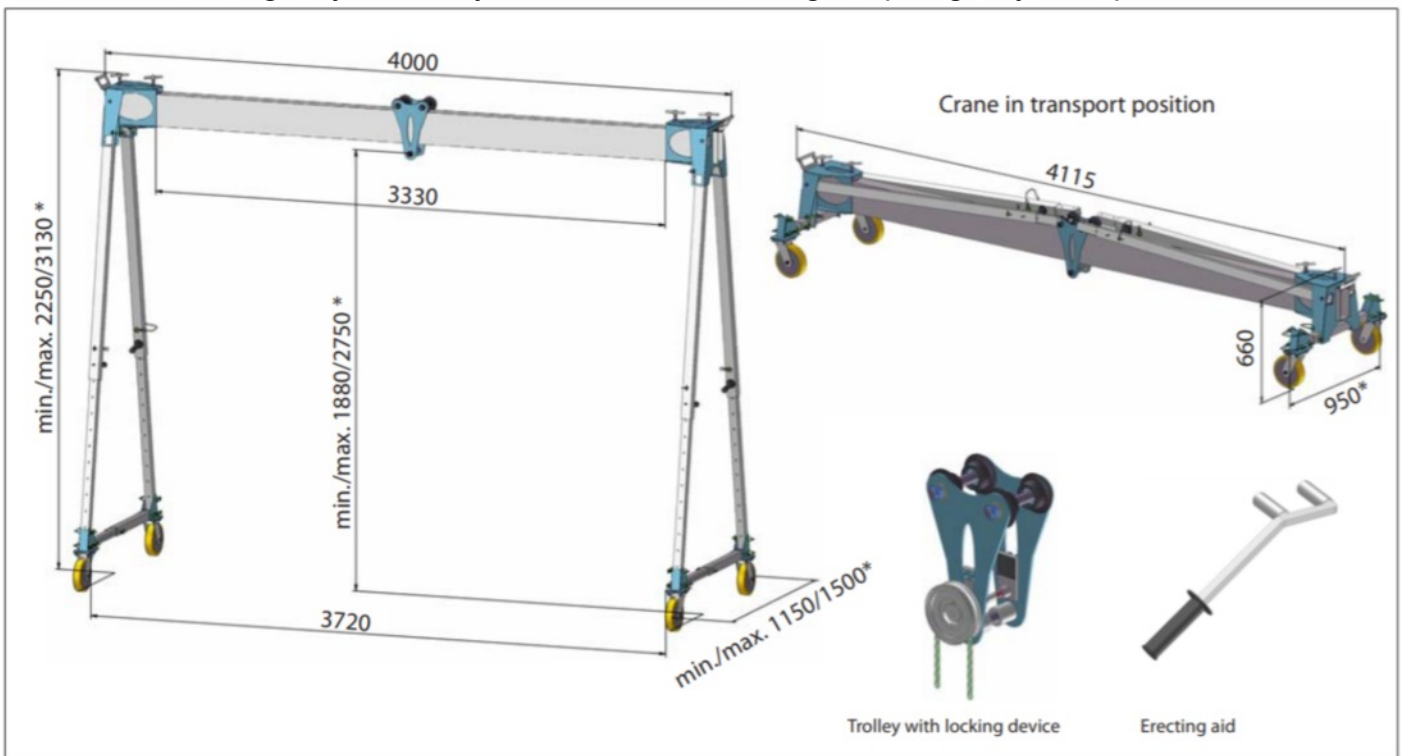

Now only the two undercarriages must be assembled. In this case the erecting aid would prove to be useful, available as accessory.

As a standard feature the distance between the legs can be continuously adjusted on both sides via two screw adjustments. The crane height required can be adjusted in intervals.

The 200 mm diameter vulcanised rubber wheels are equipped with steering wheels and a manual brake. On request, cross country off-road wheels with pneumatic tyres are available.

The crane is equipped with a ball bearing trolley LK which is easily moveable on the beam section by pushing the load.

On request, the trolley is available with a locking device. The trolley can be fitted with any manual hoist. The gantry can easily be dismantled for storage requiring very little space.

* Cranes equipped with cross country off-road wheels make the crane 50 mm higher and 100 mm wider.

Order No.	Model	Safe Working Load	Weight
535 150	Mobile aluminium crane AKF-HV 1000, with trolley LK	1,000 kg	130 kg
722 031	Manual chain hoist HZE 1.0, lifting height 3 m, construction height 330 mm	1,000 kg	12 kg
048 671	Locking device for trolley	1,500 kg	9 kg
048 648	Hand-gearred trolley (total height + 80 mm)	1,500 kg	10 kg
048 641	Erection aid (2 pieces)		3 kg
048 670	Wheel set: cross country off-road wheels with pneumatic tyres (4 pieces)		28 kg
